

# Transform Your Life With Ron Bauer, The Founder Of Theseus Capital, Whose Mentoring Founders and Entrepreneurs On The Future Of Technology

by Samantha Cornwell – September 14, 2022 in Technology

*Ron Bauer, the dynamic Venture Capitalist and Financial Engineer with over 20 years of international Private Equity experience has now set his sights on giving back to dynamic founders. Through mentoring and coaching entrepreneurs, founders, and SMEs, Bauer aims to take you on a journey to broaden your mind for the future and beyond.*

Every day we are at the mercy of a rising technology – artificial intelligence (AI). As overwhelming as it may seem, this technology isn't new. For the past half a century, it's been an innovative growing phenomenon. Like all plateaued lines, it's hard to tell when a spike will skyrocket, but over the past few years, AI has become the next 'big thing' whether we like it or not.

Thanks to data and advanced processing speeds, computers can quickly make sense of information. Because of this, venture capitalists are fusing this continuously evolving technology into our heavily advanced market system.

It has become so successful that in 2019, about \$35.8 billion was invested in worldwide AI to design machines built for human beings to perform various tasks more efficiently. In fact even Asia Pacific is on its way to investing about \$5.5 billion in an artificial intelligence system, which is up 80% since 2018. It's rising so fast that researchers and procedures indicate that by 2026, humans will support about \$8 billion in the AI health care systems alone.

So if the future is inevitable, how far is too far?

A powerful individual who knows a lot about adapting to change is well known business investor and coaching guru, **Ron Bauer**. One of his most outstanding personal qualities is his "ability to adapt to changing economic climates and diversifying sectors."

With extensive insight into multiple sectors, including life sciences, technology, gaming, natural resources, and AI, the successful venture capitalist and now life coach and mentor is on a mission to push his future clients to greatness.

If you are a budding entrepreneur, founder, or SME' in the technology sector, contact Ron Bauer to take you to the top, through the future, and beyond.

With a passion for helping founders and entrepreneurs make their dreams a reality, serial entrepreneur and [Theseus Capital](#) founder [Ron Bauer](#) discusses the pros and cons of AI and technology:

**Pro: *The Future Is Inevitable As Humans Move Up The Cognitive Scale.***

Today, we need AI and technology as much as it requires us to function. Given intelligence and automation value, we will continue improving our technology if we can. Artificial intelligence has become so dependent on our society that something would have to destroy our civilization to stop us from exploring further. AI is everywhere. It's in our homes, cars, schools, and at work.

So where, if ever, does it stop? With an entirely new plethora of exciting opportunities at our fingertips that allow people to rethink how we integrate information, analyze data, and use the resulting insights to improve decision-making, what better way to do so than by creating systems that do it for us?

But an increase in AI and technology calls for more experienced mindsets to build, design, and pull together these machines outperforming superhuman intelligence already. We need people in the field with in-depth knowledge of these categories to pave the way for our future generations.

**Con: *Robots Are Replacing Jobs Which In Turn Promotes Laziness In Humans.***

But, once seen as a 'killing mechanism' is now treated with a bit more nuance. The fear now is that AI and technology will replace us; they will take our jobs and industries and change everything and make us irrelevant. Every organization is looking to replace the lesser qualified individuals with AI robots that can do similar work more efficiently.

Especially when it comes to repetitive tasks, human interference is becoming less, which could cause a significant problem in the employment standards. Not to mention making humans lazy with its applications automating most of the work. Humans tend to get addicted to these inventions, which can cause a problem for future generations.

**Pro: *You Can Start Up A Business For As Little As \$1000***

With more AI and technology taking over, the online job space has opened up numerous possibilities for individuals to take on a passion or purpose. Starting up your own business has never been so easy. It is here that people can express themselves to the world, working with assets like the metaverse, Internet, and social media to create a synthetic intelligence that is better and smarter than either side.

**Con: *Everybody In Today's Generation Wants To Be A Boss.***

However, according to [Smart Insights](#), with the number of social media users globally growing from 4.2 billion in January 2021 to 4.62 billion in January 2022, the competition in the marketing sector could prove to be complicated.

This is why having a mentor or guide who has reached success through technology and AI is crucial. The biggest advantage of having a mentor is that they have already achieved a level of success or something that you yourself are pursuing. "This is not an automated process – it's a human connection from someone who has done it multiple times over and over," shares Bauer.

By finding creative solutions along the way, a mentor or business coach will share these insights with you, decreasing the time it takes for you to reach their level and maximizing your chance of success.

In the end, a developing system always has advantages and disadvantages. Every new invention or breakthrough will have both, but we as humans need to take care of that and use the positive sides of the design to create a better world. If it is inevitable, our need to learn and grow through mentorship is crucial in this sector.

Ron Bauer has a proven track record of raising capital across all sectors in ever-changing market conditions, taking dozens of companies with him to the top. "Hiring someone like me as your business coach or mentor would be a massive life-saving opportunity. I'm also the least expensive part of the equation, but I only work with a few select founders at a time," explains Bauer.
